Listing of Claims

In the claims:

1. (currently amended) A base plate (1) for a power tool (13), in particular for hand-quided circular saws, sabre saws, wall chasers, and routers, comprised of a metal sheet, having reinforcing elements that protrude out from a plane of the metal sheet, at least one of said plurality of reinforcing elements is embodied in a the form of a lateral stop surface (12) configured as two opposing longitudinal sides of a circumferential collar (6) that extends over least three peripheral sides of the base plate, where the peripheral side connecting the two opposing longitudinal sides comprises having a first connecting element (18), and another of said reinforcing elements is configured as an additional collar (21) surrounding an opening (22) for a saw blade and comprising having a second connecting element (18), and having a row of attaching elements (14) that protrude out from the plane of the metal sheet and are provided for fastening the base plate (1) to a miter angle (23), wherein projections (8) and a threaded dome (9) for guiding and positioning a parallel cutting guide (5) and/or the first and second connecting elements (18) for an angle adjustment and/or a guide channel (10) are integrated into the base plate (1), wherein the connecting elements (18) have bores (11) for supporting a pivot pin and defining a rotation axis for an angle adjustment of a saw blade (19), wherein the metal sheet is configured as a stamped and bent metal sheet composed of a light metal alloy and the entire

base plate (1) is embodied in one piece, and wherein a material thickness (15) of the metal sheet is less than 4mm.

- (previously presented) The base plate (1) as recited in claim 1,
 wherein a material thickness (15) of the metal sheet is 3 mm.
- 3. (previously presented) The base plate (1) as recited in claim 1, wherein the metal sheet is comprised of an aluminum or magnesium alloy.
 - 4. (cancelled)
- 5. (currently amended) The base plate (1) as recited in claim 1, [[4,]] wherein the circumferential collar (6) has a height (17) as considered transversely to the plane of the metal sheet of at least twice a material thickness (15) of the metal sheet as considered transversely to the plane of the metal sheet.
- 6. (previously presented) The base plate (1) as recited in claim 1, wherein another one of said plurality of reinforcing elements is embodied in the form of a crease (7).
 - 7. (cancelled)

- 8. (cancelled)
- 9. (previously presented) A method for manufacturing a base plate (1) as recited in claim 1, wherein the method is comprised of a stamping and bending process.
